

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A communication control method for controlling wireless data communication conducted between a portable information communication terminal and a data communication apparatus via a communication network including a radio communication network, said communication control method comprising the steps of:

determining a termination situation, when wireless data communication between said portable information communication terminal and said data communication apparatus has been disconnected, so as to classify the termination situation into normal termination, which is a disconnection according to normal procedure, or interrupted line disconnection, which is a disconnection interrupted without normal procedure, wherein accounting data is stored for each data communication with the termination situation;

checking the stored accounting data to determine whether there is any accounting data for the data communication between said portable information communication terminal and said data communication apparatus, for which the termination situation is classified as interrupted line disconnection, and which occurred within a predetermined time before the normal termination of data communication between the portable information communication terminal and the data communication apparatus;

if accounting data for which the termination situation is classified as interrupted line disconnection is found in the checking step, clearing the found accounting data to avoid charging for the disconnection interrupted without normal procedure.

~~determining whether wireless data communication between said portable information communication terminal and said data communication apparatus has been interrupted by disconnection of a communication line and whether the disconnection of the data communication is a normal termination of data communication; and~~

~~in response to a normal termination of data communication between the portable information communication terminal and the data communication apparatus, clearing accounting on said data communication that was interrupted between said portable information communication terminal and said data communication apparatus by disconnection of said communication line, if said interrupted data communication was interrupted within a predetermined time before the normal termination of data communication.~~

2. – 4. (canceled)

5. (currently amended) A communication control system for controlling wireless data communication conducted between a portable information communication terminal and a data communication apparatus via a communication network including a radio communication network, said communication control system comprising:

determining a termination situation, when wireless data communication between said portable information communication terminal and said data communication apparatus has been disconnected, so as to classify the termination situation into normal termination, which is a disconnection according to normal procedure, or interrupted line disconnection, which is a disconnection interrupted without normal procedure, wherein accounting data is stored for each data communication with the termination situation;

checking the stored accounting data to determine whether there is any accounting data for the data communication between said portable information communication terminal and said data communication apparatus, for which the termination situation is classified as interrupted line disconnection, and which occurred within a predetermined time before the normal termination of data communication between the portable information communication terminal and the data communication apparatus;

if accounting data for which the termination situation is classified as interrupted line disconnection is found, means for clearing the found accounting data to avoid charging for the disconnection interrupted without normal procedure.

~~a communication situation control section for determining whether wireless data communication between said portable information communication terminal and said data communication apparatus has been interrupted by disconnection of a communication line and whether the disconnection of the data communication is a normal termination of data communication; and~~

~~an accounting calculation section responsive to a normal termination of data communication between said portable information communication terminal and said~~

~~data communication apparatus, for clearing accounting on said data communication that was interrupted between said portable information communication terminal and said communication apparatus by disconnection of said communication line, if said interrupted data communication was interrupted within a predetermined time before the normal termination of data communication.~~

6.- 8. (canceled)

9. (currently amended) A storage medium containing a program operative on that makes a computer to function as a communication control system for controlling wireless data communication conducted between a portable information communication terminal and a data communication apparatus via a communication network including a radio communication network, wherein said program when executed ~~making~~ is operative on the computer ~~function as to perform the steps of:~~

determining a termination situation, when wireless data communication between said portable information communication terminal and said data communication apparatus has been disconnected, so as to classify the termination situation into normal termination, which is a disconnection according to normal procedure, or interrupted line disconnection, which is a disconnection interrupted without normal procedure, wherein accounting data is stored for each data communication with the termination situation;

checking the stored accounting data to determine whether there is any accounting data for the data communication between said portable information communication terminal and said data communication apparatus, for which the

termination situation is classified as interrupted line disconnection, and which occurred within a predetermined time before the normal termination of data communication between the portable information communication terminal and the data communication apparatus;

if accounting data for which the termination situation is classified as interrupted line disconnection is found in the checking step, clearing the found accounting data to avoid charging for the disconnection interrupted without normal procedure.

~~a communication situation control section for determining whether wireless data communication between said portable information communication terminal and said data communication apparatus has been interrupted by disconnection of a communication line and whether the disconnection of the data communication is a normal termination of data communication; and~~

~~an accounting calculation section responsive to a normal termination of data communication between said portable information communication terminal and said data communication apparatus, for clearing accounting on said data communication that was interrupted between said portable information communication terminal and said data communication apparatus by disconnection of said communication line, if said interrupted data communication was interrupted within a predetermined time before the normal termination of data communication.~~

10. – 12. (canceled)
